

# EasiShare Use Cases

## By Industry

## For Higher Education

- No risk of sharing outdated information by sharing work-in-progress files
- Sharing of feedback and comments in chronological order
- File upload request creation by lecturer for students
- Read only folder for distribution of assignments, newsletters or any digital materials
- Broadcasting email with EasiShare link for result distribution
- Secured file sharing system between specific faculty members
- Efficient collaboration of research materials between institutions
- Create, edit, and share files while attending conferences and academic events

### How it Works

- Enterprise-grade, secure file sharing
  - Uses AES 256bit encryption and authenticates the server to the user for secure file sharing.
  - Able to administer folders and sub-folders, seamlessly sharing files with team members.
- Intelligent synchronization
  - Manage full version history of every file with conflict management capabilities.
  - Accessing all files from any where, any device.
  - Ability to download files to mobile devices.
- Outlook Integration
  - Select files directly from EasiShare storage for secure file sharing.
  - Adjust the level of security when sending each email with attachment.
  - Intelligent notification of "Sending" status.

## For Healthcare

- On-premise configuration stores and retains all confidential patient information within hospital premises
- Sharing of large-sized patient files and reports across distinct geographical locations
- Encrypted transmission to protect patient data and to secure mobile repository for the patient's medical history
- Secure offline access of patient information by surgical team within the operating theatre
- Enhanced control on access of patient personal information
- Increased efficiency in treatment by instant access of patient's medical history

### How it Works

- File sharing and management
  - Secure file sharing with multiple security levels.
  - Folder and sub-folder structure to share files with permissions.
- Access contents from multiple sources
  - Notifications sent to you by other users appear in your inbox.
  - Access contents from File Servers, Sharepoints, or even cloud storages like AWS and Azure.
  - Manage all access using the EasiShare CA Portal.
- Security you can trust
  - Set granular permissions against each user, group or organization users with policy control at function level.
  - Restrict access by devices and also IP address restricted drive access.

## For Media

- Large media files shared within seconds across geographies
- Simplify and accelerate the time sensitive script distribution process
- Expiration dates ensure extra security of IP
- Easily access and annotate scripts and musical scores on any media
- Lower copyright concerns using secure file sharing
- Access to documents to only authorized users due 2FA
- Remove access to IP anytime

### How it Works

- Sharing large file made simple
  - Central, secure location to view and access files.
  - Select a file, files or folder and notify those that you want to share it with.
  - They will then receive a notification in their inbox where they can click on the link to where the file is kept.
- Enterprise-grade, secure file sharing
  - Uses AES 256bit encryption and authenticates the server to the user for secure file sharing.
  - Able to administer folders and sub-folders, seamlessly sharing files with team members.
- Access contents from multiple sources
  - Notifications sent to you by other users appear in your inbox.
  - Access contents from File Servers, Sharepoints, or even cloud storages like AWS and Azure.
  - Manage all access using the EasiShare CA Portal.

## For Insurance

- Uploading of in-car captured videos to be use as evidence.
- Videos are usually large files >50Mb.
- Insurance agents are able to send a link to request for the upload.
- Links can be secure additionally with OTP and expiry date.
- Video footage are then sent by policy holders to insurance agent.
- Insurance agent are notified when videos are uploaded.

### How it Works

- Large file request made simple
  - Central, secure link to request files from external parties.
  - One or multiple files can be uploaded.
  - Requestor will received notification by email once the upload(s) is completed.
- Enterprise-grade, secure file transfer
  - Uses AES 256bit encryption and authenticates the server to the user for secure file transfer.
  - Additional security like OTP and link expiry can be enforced for highly sensitive uploads.
- Quick access to uploaded contents
  - Notifications sent to you appears in your inbox.
  - Dedicated upload folders for quick access by section.
  - Able to access uploaded contents from desktops or mobile devices.

## By Features

## For Boardroom Meetings

- Often the most critical documents shared by organisations; Board Reports, Executive Papers, Council Papers are being distributed using unsecure, un-auditable or risky technologies.
- Reports are shared via email, USB sticks, consumer grade file-sharing tools. Sometimes they are even printed then posted or hand delivered.

### How it Works

- Immediate Delivery
  - Your reports are distributed in a matter of seconds and you know the reports will always be received.
- Easy, secure access
  - Participants can access the documents from any device and any time. Access is restricted to the authenticated group only.
- Complete visibility
  - You have complete visibility of what information has been delivered to whom.

## For Secure File Sharing

- Your content is slipping out the front door without you noticing. Your workforce still transfers company files to unsecure personal devices. Organizations are wrongly stretching supposedly secure file sharing platforms like Dropbox or Box to become permission-based content collaboration platforms. As the personal cloud storage environment grows, significant security flaws open up around who sees the confidential information and what they do with it.
- EasiShare keeps your content secure with high-caliber security features. We are pan-government accredited, and ISO 22301 certified.

### How it Works

- Enterprise-grade, secure file sharing
  - Uses AES 256bit encryption and authenticates the server to the user for secure file sharing.
  - Able to administer folders and sub-folders, seamlessly sharing files with team members.
- Intelligent synchronization
  - Manage full version history of every file with conflict management capabilities.
  - Accessing all files from any where, any device.
  - Ability to download files to mobile devices.
- Outlook Integration
  - Select files directly from EasiShare storage for secure file sharing.
  - Adjust the level of security when sending each email with attachment.
  - Intelligent notification of "Sending" status.

## For Collaboration

- Why does collaboration software seem to undermine collaboration as opposed to underpin it? By common consent, many solutions are tricky to use and prohibits collaboration across the firewall with third-parties. Consumer storage tools like Dropbox or Yousendit are notoriously non-secure. And email? It only includes the people you think to include, it's not discoverable by others, and it's disorganized. It's time to think outside the in-box.
- EasiShare enables you to quickly connect with the people, content and resources needed to get work done.

### How it Works

- Intelligent synchronization
  - Search for files using the Search function.
  - Getting up-to-date files across all devices.
- Administrative control and security
  - Working with colleagues on the same documents, keeping track so different versions.
  - Include a complete, detailed audit trail of the file movements.
  - Remote wipe contents from mobile lost devices.
- Lighten your inbox load
  - Receive secure and large email attachments by providing a link to your collaborators.
  - The integration is right in the Outlook ribbon bar, so it's really easy to find when you need it.
  - Adjust the level of security when sending each email with attachment.

## For Intranet Replacement

- Why does your Intranet inhibit collaboration? The clue is in the word. In most commercial and government organizations, your Intranet Portal is protected from unauthorized external access by means of a network gateway and firewall. That makes it slow and sometimes impossible to collaborate with third parties, such as contractors, agencies or partners.
- EasiShare breaks through this barrier, providing a secure environment where content can easily and securely be accessed by team members—whichever side of the firewall they sit. No more VPN and firewall configurations and no need to create additional profiles.

### How it Works

- File sharing and management
  - Secure file sharing with multiple security levels.
  - Folder and sub-folder structure to share files with permissions.
- Access contents from multiple sources
  - Notifications sent to you by other users appear in your inbox.
  - Access contents from File Servers, Sharepoints, or even cloud storages like AWS and Azure.
  - Manage all access using the EasiShare CA Portal.
- Security you can trust
  - Set granular permissions against each user, group or organization users with policy control at function level.
  - Restrict access by devices and also IP address restricted drive access.

## For SharePoint Alternative

- Whether your organization is already using SharePoint or you're looking for a better option, EasiShare is the perfect SharePoint alternative. As you may already know, SharePoint suffers from incredibly low adoption. Thousands of users say they dislike using it. As a result, users find a work around—faster, easier ways to accomplish the same thing. This can turn your ROI upside down.
- SharePoint is also known for being expensive and difficult to administer—an unwieldy beast, wearing an outrageous price tag. But you may already know that. If you haven't adopted SharePoint, it's a good idea to estimate the total cost of deployment and the operations of software and hardware that stretch far beyond licensing prices.

### How it Works

- Save your work to the cloud from native applications
  - Upload documents, images, videos and more into SharePoint alternative, EasiShare
  - Continue working from MS Office and other applications
  - Simple save your changes and EasiShare automatically updates
- Easily share files and control access
  - Share files with other collaborators
  - Manage permissions controls in a few clicks
- Work from any device
  - All your files are automatically synced across your devices
  - Create, share and receive files.
  - View offline files on the go.

## For Document Management

- Document management software promises the earth: instant access to files, a single source of archived data and increased productivity. Here's the bit they don't tell you: a complete version control, accessing files from multiple storages and a lack of cross-firewall collaboration.

### How it Works

- Sharing large file made simple
  - Central, secure location to view and access files.
  - Select a file, files or folder and notify those that you want to share it with.
  - They will then receive a notification in their inbox where they can click on the link to where the file is kept.
- Enterprise-grade, secure file sharing
  - Uses AES 256bit encryption and authenticates the server to the user for secure file sharing.
  - Able to administer folders and sub-folders, seamlessly sharing files with team members.
- Access contents from multiple sources
  - Notifications sent to you by other users appear in your inbox.
  - Access contents from File Servers, Sharepoints, or even cloud storages like AWS and Azure.
  - Manage all access using the EasiShare CA Portal.
